

Salesforce Consolidation Strategy

A CRM Implementation Playbook for New Home Sales Operations

Prepared by: Kelsey M. Howell-Conde | June 2026

Based on 6+ years of new home sales experience at Lennar and Century Communities

EXECUTIVE SUMMARY

Century Communities currently requires Community Sales Managers to navigate six or more separate systems to complete a single home sale. This fragmentation increases ramp time for new hires, slows deal approvals, creates friction in the customer experience, and pulls CSMs away from the work that drives revenue — being in front of customers. This playbook documents the gap between Century's current CRM setup and the consolidated Salesforce model used by Lennar, the number one homebuilder in the nation, and proposes a three-phase implementation roadmap to close it. The solution does not require new technology — it requires connecting technology Century already owns in a smarter way.

SECTION 1 — CURRENT STATE: THE CANNONBALL PROCESS

Phase 1: The Cannonball Sale

Step	Action
1	Meet and Greet
2	Model Tour
3	Community, Amenity, and Homesite Tour
4	Build Value with a Price Out
5	Contract

Phase 2: New Sales Roadmap

Step	Action	Tool
1	Enter prospect into Salesforce	Salesforce
2	Apply with IHL (Inspire Home Loans)	IHL Portal
3	Send EMD payment link to buyer	PayerExpress
4	Prepare and send contract	DocuSign + NewStar
5	Deal approval	ServiceNow
6	New Sales Flash — announce sale citywide	Email / Teams

Phase 3: Construction Coordination Through Closing

Step	Action	Tool
1	Determine walkthrough dates using Close Date Calculator	Close Date Calculator
2	Monday sales and construction meeting — receive available times	In-person meeting
3	Send update to buyers and agent with dates, times, and home updates	Email / Outlook
4	Parkway Title sets closing on Houston Closings calendar	Outlook Calendar
5	Buyer funds — reflected on calendar	Outlook Calendar
6	Buyer picks up keys from model home	In-person

SECTION 2 — GAP ANALYSIS: CURRENT STATE VS. BEST IN CLASS

The following table documents seven operational gaps between Century Communities' current multi-system approach and the consolidated Salesforce model used by Lennar, the #1 homebuilder in the nation. Each gap has a direct impact on CSM productivity, deal velocity, or customer experience.

Task	Current Tool	Lennar Solution	Impact
Lead tracking	Salesforce	Salesforce	No change needed
Home paneling and options	NewStar (separate system)	Built into Salesforce (job number > address > options)	NewStar eliminated
Deal approval	ServiceNow (separate system)	Salesforce Chatter (instant mobile notification)	Hours to minutes
EMD collection	PayerExpress (separate system)	Salesforce integrated payment link	PayerExpress eliminated
Contract prep and signing	DocuSign + NewStar	DocuSign + Salesforce	Contract lives in sale record
Marketing files and inventory	Shared Drive (separate system)	Salesforce integrated file access	Real-time access in one place
Team communication and incentives	Teams and email chains	Salesforce Chatter (pinned to homesite)	Eliminates irrelevant email chains
Appointment rotation	Manual coordination between CSMs	Salesforce Calendar (internet sales visibility)	Internet leads assigned in real time

SECTION 3 — BUSINESS CASE

\$293,163 Avg. Home Price at Paloma	50 Estimated Houston CSMs	2 Weeks Experienced CSM Ramp Time	6+ Systems Required
--	--------------------------------------	--	--------------------------------

Onboarding Velocity Impact

An experienced CSM joining Century today spends approximately two weeks learning six systems before selling confidently. At Lennar that ramp was measured in days. With an average home price of \$293,163 and a Houston team of roughly 50 CSMs, recovering even one week of productivity per experienced new hire adds up to significant accelerated revenue. A new-to-industry CSM currently needs two full months to ramp. Consolidating to one primary system could reduce that to five to six weeks.

Deal Velocity Impact

Every deal pending ServiceNow approval is a deal at risk. Buyers change their minds. Interest rates move. Competing builders make offers. A deal approval that takes hours instead of minutes is a retention risk on a \$293,163 transaction. Salesforce Chatter sends an instant mobile notification — managers can approve on the go in minutes rather than waiting to access a separate system.

Customer Experience Impact

A buyer spending nearly \$300,000 on a home deserves a seamless process. Being redirected to PayerExpress for their earnest money deposit and receiving contracts from a system disconnected from their sale record signals fragmentation. A consolidated Salesforce experience — payment link, contract, and communication all in one place — reflects the professionalism the purchase deserves and reduces buyer anxiety during a complex transaction.

Internet Lead Impact

When an internet lead contacts Century, the current rotation process requires CSMs to manually coordinate who takes the appointment. With Salesforce Calendar visibility, the internet sales team can see rotation and availability in real time and assign the appointment instantly. Internet leads are among the highest-intent buyers in the funnel — every minute of delay is a minute they could be calling a competing builder.

SECTION 4 — IMPLEMENTATION ROADMAP

Phase 1 — Eliminate the Two Biggest Friction Points | Target: 60-90 days

Priority	Action	Systems Retired
1	Integrate DocuSign with Salesforce — contracts prepared, sent, and signed within the sale record	NewStar (partial)
2	Build paneling and options summary into Salesforce — CSMs access home details and inventory directly	NewStar (fully retired)
3	Integrate EMD collection link into Salesforce — buyers receive payment link through the sale record	PayerExpress (fully retired)

Phase 1 Outcome: NewStar and PayerExpress fully retired. CSMs handle contracts, paneling, and EMD collection without leaving Salesforce. New hire systems training drops from 6 systems to 3.

Phase 2 — Consolidate Communication and Approvals | Target: 30-60 days after Phase 1

Priority	Action	Systems Retired
1	Activate Salesforce Chatter for deal approvals — managers chattered under homesite, instant mobile notification	ServiceNow (transitioning)
2	Train CSMs and managers on Chatter deal approval workflow	ServiceNow (fully retired)
3	Establish Houston Division Chatter for team-wide notifications and incentive updates	Teams / email chains (reduced)

Phase 2 Outcome: ServiceNow retired. Deal approvals happen in real time. Team communication consolidates into Salesforce Chatter. New hire systems training drops from 3 systems to 2.

Phase 3 — Marketing, Inventory, and Scheduling Integration | Target: 30-60 days after Phase 2

Priority	Action	Systems Retired
1	Integrate marketing files and branded inventory sheets into Salesforce — accessible from any community record	Shared Drive (reduced)
2	Pin incentives and promotional flyers to homesite Chatter — marketing team shares directly	Email distribution (reduced)
3	Activate Salesforce Calendar for appointment rotation — internet sales team sees CSM availability in real time	Manual rotation (fully retired)

Phase 3 Outcome: CSMs pull inventory, access marketing materials, and manage appointments without leaving Salesforce. Internet leads assigned instantly. Manual rotation eliminated.

SECTION 5 — SUCCESS METRICS FRAMEWORK

Metric	Baseline	Target
ONBOARDING VELOCITY		
Time to first sale — experienced CSM	2-4 weeks	3-7 days
Time to first sale — new to industry CSM	6-8 weeks	3-4 weeks
IT tickets submitted by new CSMs (30 days)	Establish baseline	Reduce 50%+
DEAL VELOCITY		
Average deal approval time	Establish baseline	Reduce 60%+
Internet lead to appointment assignment	Establish baseline	Under 5 minutes
CUSTOMER EXPERIENCE		
Customer satisfaction survey scores	Establish baseline	Measurable improvement
Customer questions about process during escrow	Establish baseline	Reduction in volume
EMPLOYEE EXPERIENCE		
Employee survey scores related to tools	Establish baseline	Measurable improvement
CSM voluntary turnover rate	Establish baseline	Reduction over 12 months

SECTION 6 — END STATE COMPARISON

Metric	Before	After
Systems required to do the job	6+	1 primary
Experienced CSM ramp time	2 weeks	3-5 days
New CSM ramp time	2 months	5-6 weeks
Deal approval speed	Hours to days	Minutes
Internet lead assignment	Manual coordination	Real time
Contract location	NewStar / DocuSign	Salesforce sale record
EMD collection	PayerExpress (separate)	Salesforce integrated link
Marketing and inventory access	Shared Drive (separate)	Salesforce community record
Team communication	Teams and email chains	Salesforce Chatter

This playbook was developed based on direct, firsthand experience operating inside both systems — five years at Lennar and ongoing experience at Century Communities. Every gap identified is real. Every number in the business case came from actual home prices and team sizes. The solution does not require Century to invest in new technology. It requires connecting technology they already own in a smarter, more intentional way — the way the number one homebuilder in the nation already does.
